Job Experience

Company Name	Panasonic Foundry Malaysia Sdn. Bhd.
Period	Jun 2011 till Sep 2011
Job Title	Intern (Engineering Department Trainee)
Job Description	I was first given the task of monitoring the operation of the melting furnace for one month to monitor the melting process. I was then given the task of analyzing the sand composition for the sand to be used for the mold in the production process. Throughout my internship, I was required to prepare daily records to be keyed in to the company system. I was also given the task of designing a gauge for the disc brake casting mold using AutoCAD software available in the company. At the final month of my internship, I was given a project to monitor a manufactured part that have a high reject rate then provide suggestions to reduce the high reject rate.
Reason for Leaving	Completed internship

Software Knowledge:

1. Microsoft Office Word, Power Point and Excel

2. Basic knowledge and usage of AutoCAD, Autodesk Inventor and CATIA.

About myself

Time is a major concern for me. I do not like to be late for anything and I also do not like others to be late too. I am a person who does not like to do things halfway and will complete the task given to me even if it means that I must work long and hard.

I am not interested in being a person who has all the control commands other people, I would prefer to get the work done as a team where we can share ideas and complete the task given more efficiently.
